Abstract of KR20030039210

PURPOSE: A music video system having a user image synthesizing function is provided to allow a user to appear on a music video film through a three-dimensional character on which the user's face image is reflected. **CONSTITUTION:** A music video system having a user image synthesizing function includes a camera(11) for photographing the face of a user, a microphone(15-2), a speaker(15-1), a monitor(14), a key input unit(12) through which various key signals are inputted, and a singer information storage unit(16-1) for storing song information for each singer and a three-dimensional dance motion picture for each song. The music video system further includes a character storage unit (16-5) for storing at least one three-dimensional character, a dance motion storage unit(16-2) for storing three-dimensional information about dance motions to be performed by characters, and a data recording unit(13) for recording data in a portable digital data storage medium. The music video system also has a local computer(17) that displays the song information and character information to allow the user to select a song and a specific character, photographs the user's face through the camera, converts the photographed face into the three-dimensional image and combines the three-dimensional image with the selected character. The local computer allows the combined three-dimensional character to move according to a corresponding dance motion; records the user's song through the microphone, and records the three-dimensional dance motion picture with the user's song in a corresponding digital storage medium.
